This book presents a comprehensive and expert-led insight into the role, types, practises and determinants of corporate narrative reporting (CNR). It provides a detailed overview of the importance of narrative disclosure in understanding the full annual report and, consequently, company performance and future prospects. CNR comprises integral information presented in the front half of the annual report, which helps to tell the full story of a business, providing a comprehensive overview and understanding of both its past and future performance. Supported with illustrative tables and figures throughout, this volume contains a plethora of carefully selected chapters, featuring the analytical insight of knowledgeable academics and researchers from all over the world. Using different data collection and analysis methods, it links and advances theory and practice in the disclosure and presentation of non-financial information in annual reports and other disclosure channels. The book is logically structured into four parts: Narrative Reporting: The State of the Art Empirical Research on Narrative Reporting Narrative Sustainability Reporting Narrative Reporting in Times of Crisis Providing a global insight into CNR in practice, Corporate Narrative Reporting is an invaluable resource for both students and practitioners interested or involved in preparing, reviewing/auditing, analysing and understanding annual reports. It should also be of particular interest to policymakers, regulators and investors.

Humanity has so far failed to respect some essential compatibility limits to ensure sustainable development. Is it possible to change the course? This book revolves around this question, focusing on climate change. Averting Climate Catastrophe Together addresses the necessity of meeting the Paris Agreement temperature target and explores what framework could enable climate action in an effective, efficient and equitable manner that is consistent with that goal. It also looks at the contribution of technological change within the economic system, including the feasibility of a global energy transition. Whether humanity can avoid catastrophic climate change appears to depend not on the availability of technological solutions, but rather on international cooperation and coordination. Given the various sustainability issues, this book also discusses whether it is possible to derive a general approach to them. It argues that dealing with compatibility limits in complex systems requires a holistic change in the system structure. Therefore, systems science is discussed together with economics, technological change, and sustainable development. This book targets scientists and experts from different disciplines due to the interdisciplinary topic, but especially from environmental economics and energy technology; policy makers, as policy recommendations are provided to address climate change; as well as the general public due to the pressing common challenge of addressing climate change and comprehensive efforts for sustainable development. Provides evidence based on climate science research on the necessity of meeting the Paris Agreement temperature target Highlights the feasibility of the global energy transition as one major option to mitigate climate change, also going into detail about the process of technological change Brings together systems science with economics, technological change, and sustainable development Derives a framework to meet the Paris Agreement temperature target, enabling coordinated climate action in an effective and efficient manner while pursuing distributive justice *Sustainability after Rio* John Wiley & Sons

EX-Ante Carbon-balance Tool for value chains BoD - Books on Demand

The Ex-Ante Carbon-balance Tool for Value Chains (EX-ACT VC) is a quantitative multi-appraisal tool that evaluates the sustainability of agrifood value chains simultaneously along several environmental, economic, and social dimensions. It analyses greenhouse gas (GHG) emissions along an agrifood value chain, from farm-gate-to-shelf, including GHG fluxes from processing and storage, to packaging and transportation; calculates a set of value-added indicators including gross production value, value-added, and net income; and estimates the number and nature of jobs created along the value chain. It also includes an estimation of food loss at each stage of the value chain; an assessment of gender and youth participation and an SDG tracker. The primary objective of EX-ACT VC is to provide decision support to design (ex-ante) and evaluate (ex-post) agrifood VC projects and policies by comparing a 'current' scenario with baseline information and a 'planned' scenario involving a future vision or goal (or implemented activities scenario in case of ex-post evaluations). EX-ACT VC helps users to quantify the sustainability performance of the selected value chain, identify the drivers of sustainability, understand how economic, social, and environmental dimensions are intertwined, and identify potential entry points for environmental and socioeconomic improvements along the selected value chain. The EX-ACT VC methodological guidelines aim at: 1) providing a comprehensive overview of the tool and helping users assess the sustainability of agrifood value chains across environmental, economic, and social dimensions using the tool; 2) describing the various methodological concepts underlying the tool to perform a value chain assessment and calculating several indicators of sustainability; 3) illustrating the structural layout of the tool, explaining data requirements, and providing step-by-step data entry guidance to perform a value chain assessment using EX-ACT VC; 4) discussing the different indicators the tool calculates and how they can be used for project and policy evaluation and design. These guidelines are intended to assist potential users of EX-ACT VC including policymakers, project managers, analysts, and researchers, among others.

Life Cycle Assessment (LCA) has developed in Australia over the past 16 years in a fragmented way with many different people and organizations contributing to the area at different times, and largely through informal or unpublished work. This publication will legitimize and document LCA research and methodology development to act as a record of what has happened and a basis for future development and application of the tool. The Centre for Design at RMIT has been a leading research center in Australia through its work on data collection, methodology development and contribution to knowledge through undertaking LCA studies for leading companies and government departments ranging from products, packaging, buildings, water management and waste management. This work, in addition to key work undertaken by other researchers, will be presented. The book will become a bridge between LCA implementation and life cycle management (LCM) and provide discussion on how LCA development will be in the future and how it integrates with available software tools.
