"A road map for investing that I have now been following for 57 years." --From the Foreword by Warren E. Buffett First published in 1934, *Security Analysis* is one of the most influential financial books ever written. Selling more than one million copies through five editions, it has provided generations of investors with the timeless value investing philosophy and techniques of Benjamin Graham and David L. Dodd. As relevant today as when they first appeared nearly 75 years ago, the teachings of Benjamin Graham, "the father of value investing," have withstood the test of time across a wide diversity of market conditions, countries, and asset classes. This new sixth edition, based on the classic 1940 version, is enhanced with 200 additional pages of commentary from some of today's leading Wall Street money managers. These masters of value investing explain why the principles and techniques of Graham and Dodd are still highly relevant even in today's vastly different markets. The contributor list includes: Seth A. Klarman, president of The Baupost Group, L.L.C. and author of *Margin of Safety* James Grant, founder of

This book addresses contemporary discourses on a wide variety of topics related to the ideological and epistemological changes of the 19th, 20th and 21st centuries, and the ways in which they have shaped the Spanish language and cultural manifestations in both Spain and Hispanic America. The majority of the chapters are concerned with 'otherness' in its various dimensions; the alien Other - foreign, immigrant, ethnically different, disempowered, female or minor - as well as the Other of different sexual orientation and/or ideology. Following Octavio Paz, otherness is expressed as the attempt to find the lost object of desire, the frustrating endeavour of the androgynous Plato wishing to embrace the other half of Zeus, who in his wrath, tore off from him. Otherness compels human beings to search for the complement from which they were severed. Thus a male joins a female, his other half, the only half that not only fills him but which allows him to return to the unity and reconciliation which is restored in its own perfection, formerly altered by divine will. As a result of this transformation, one can annul the distance that keeps us away from that which, not being our own, turns into a source of anguish. The clashing diversity of all things requires the human predisposition to accept that which is different. Such a predisposition is an expression of epistemological, ethical and political aperture. The disposition to co-exist with the different is imagined in the de-anthropocentricization of the bonds with all living realms. And otherness is, in some way, the reflection of sameness (mismidad). The other is closely related to the self, because the vision of the other implies a reflection about the self; it implies, consciously or not, a relationship with the self. These topics are addressed in this book from an interdisciplinary

perspective, encompassing arts, humanities and social sciences.

From its inception, the U.S. Department of the Interior has been charged with a conflicting mission. One set of statutes demands that the department must develop America's lands, that it get our trees, water, oil, and minerals out into the marketplace. Yet an opposing set of laws orders us to conserve these same resources, to preserve them for the long term and to consider the noncommodity values of our public landscape. That dichotomy, between rapid exploitation and long-term protection, demands what I see as the most significant policy departure of my tenure in office: the use of science-interdisciplinary science-as the primary basis for land management decisions. For more than a century, that has not been the case. Instead, we have managed this dichotomy by compartmentalizing the American landscape. Congress and my predecessors handled resource conflicts by drawing enclosures: "We'll create a national park here," they said, "and we'll put a wildlife refuge over there." Simple enough, as far as protection goes. And outside those protected areas, the message was equally simplistic: "Y'all come and get it. Have at it." The nature and the pace of the resource extraction was not at issue; if you could find it, it was yours.
