Poor student performance on summative assessments has been a common problem throughout my teaching career. This has caused me to consider alternative methods of delivering new material to my students. The purpose of this study was to investigate the effects of online learning vs. lecture on student understanding. During unit one of my treatment I delivered notes entirely by lecturing. Following each lecture, my students completed guided note questions within small groups. We discussed their answers as a class and the students then took an individual note quiz over the new material. The second unit was studied by online learning in which students logged on to our class website, read the notes individually, and answered guided note questions within small groups. We discussed their answers as a class and students completed an individual note quiz as we had done following a period of lecture. For the remainder of my treatment, I allowed my students to choose which method of note-taking they preferred and divided my students into two groups according to their responses. Students followed the same procedure as they had during the first two units. Through the analysis of data collected I was able to determine that male students learned better following units of online learning while female students learned better through lecture. I also learned that the lower level students experienced the greatest impact when changing between lecture and online learning. Despite the success many male students had with online learning, analysis of student survey data and interview responses showed that the majority of students preferred lecture to online learning and felt better prepared and more confident following units in which that strategy was implemented. Observations and journal entries suggest that I experienced fewer behavioral problems and a greater percentage of students asking and correctly answering questions following periods in which a mixture of lecture and online learning were implemented. As a result, I have concluded that combining both strategies and allowing students to choose their preferred method of note-taking will continue to have a positive effect on both my students and my future teaching.

The Crime Scene: A Visual Guide provides visual instruction on the correct way to process a crime scene. While the primary crime scene comprises the area from which most of the physical evidence is retrieved by crime scene investigators (CSIs), forensic scientists, or law enforcement personnel, this book also covers secondary and often tertiary crime scenes, all locations where there is the potential for the recovery of evidence. By using photographs and other diagrams to show proper and improper procedures, the reader will learn how to identify the correct principles required to process a scene. The book presents chapters on the investigation, the varying types of documentation, and the tactics used to connect events through crime scene reconstruction using evidence The book's authors have a combined experience of over 70 years in crime scene investigation as primary responders and consultants giving testimony in all levels of the U.S. court system. In addition, both teach forensic science and crime scene investigation at the university level. Coverage of techniques, documentation and reconstruction at a crime scene Shows side-by-side comparison of the correct process versus the incorrect process Online website will host: videos and additional instructional material *Cambridge Global English Stage 5 Teacher's Resource* Portage & Main Press

An in-depth look at the role of plant spirits in shamanic rituals from around the world • Shows how shamans heal using their

knowledge of plant spirits as well as the plant's "medical properties" • Explores the core methods of plant shamanism--soul retrieval, spirit extraction, and sin eating--and includes techniques for connecting with plant spirits • Includes extensive field interviews with master shamans of all traditions In *Plant Spirit Shamanism*, Ross Heaven and Howard G. Charing explore the use of one of the major allies of shamans for healing, seeing, dreaming, and empowerment--plant spirits. After observing great similarities in the use of plants among shamans throughout the world, they discovered the reason behind these similarities: Rather than dealing with the "medical properties" of the plants or

specific healing techniques, shamans commune with the spirits of the plants themselves. From their years of in-depth shamanic work in the Amazon, Haiti, and Europe, including extensive field interviews with master shamans, Heaven and Charing present the core methods of plant shamanism used in healing rituals the world over: soul retrieval, spirit extraction, sin eating, and the Amazonian tradition of *pusanga* (love medicine). They explain the techniques shamans use to establish connections to plant spirits and provide practical exercises as well as a directory of traditional Amazonian and Caribbean healing plants and their common North American equivalents so readers can explore the world of plant spirits and make allies of their own.
