Strict liability is a controversial phenomenon in the criminal law because of its potential to convict blameless persons. Offences are said to impose strict liability when, in relation to one or more elements of the actus reus, there is no need for the prosecution to prove a corresponding mens rea or fault element. For example, in the 1986 case of Storkwain, the defendant chemists were convicted of selling controlled medicines without prescription simply upon proof that they had in fact done so. It was irrelevant that they neither knew nor had reason to suspect that the 'prescriptions' they fulfilled were forgeries. Thus strict liability offences have the potential to generate criminal convictions of persons who are morally innocent. Appraising Strict Liability is a collection of original contributions offering the first full-length consideration of the problem of strict liability in the criminal law. The chapters, including European and Anglo-American perspectives, provide a sustained and wide-ranging examination of the fundamental issues. They explore the definition of strict liability; the relationship between strict liability and blame, and its implications for the requirement for culpability in criminal law; the relevance of European and human rights jurisprudence; and the interaction between substantive rules of strict liability and evidential presumptions. The breadth and depth of the contributions combine to present readers with a sophisticated analysis of the place and legitimacy of strict liability in the criminal law.

In March 1940, with Europe at war, French army lieutenant Henri-Georges Doll came to the U.S. embassy in Paris to give a deposition. Doll was an artillery commander, a graduate of France's grandes écoles of science, engineering, and service. He had been mobilized to the front at the start of the war, then quickly recalled to Paris to work on a secret device for detecting the deadly land mines being planted by the German army on a vast new scale. But Doll's deposition that day had nothing to do with the war. He had come to testify in a patent lawsuit pending in Houston, Texas. The case was Schlumberger Well Surveying Corporation v. Halliburton Oil Well Cementing Company: it marked one of the first great industrial battles for control of the technology of oil and gas exploration. When the German army marched into Paris three months later, Doll escaped to America, where he developed his new mine detector for the U.S. army, then settled in a small Connecticut town to become one of the most prolific inventors of the twentieth century. His sixth sense for applied science would help create the modern technology of seeing underground using electrical signals and sound waves, technology that enabled the explosive growth of oil production after the war and built oilfield services giant Schlumberger.

Multiple senses, like multiple intelligences, are a key to brain variability and therefore human evolution. Besides the traditional five senses (vision, olfaction, gustation, audition, and somatosensory), humans can also perceive the body's own position (the sense of proprioception) and movement (the vestibular sense). Interoception is the feeling one has about the internal physiological conditions of the entire body. Additionally there is a sense of intuition, also known as the sixth sense. Despite their best efforts, researchers are still unable to concur in specifying the nature of the sixth sense; some consider the sense of proprioception as the sixth sense, whereas others prefer to consider that as a part of interoception. This book will provide a scientific system for the human sixth sense using relevant biophysical and neurophysiological evidence. The power of "sixth sense" seems to be underestimated, due to difficulties in defining the concept clearly. According to socioeconomics and neural physics, the sixth sense is that which permits humans to create perception or to enhance the quality of their perception of events. Roughly speaking, the sixth sense engages a metacognitive process through which prior knowledge and the information received from other sensory modalities are synergized. It is not restricted to specific arrow of time and type of mind or to the observer's body, but it considers all arrows of time (past, present, future), types of mind (conscious and unconscious), and physical bodies (self and other). However it is expected that the observer has specific biases towards what happens now or would happen in the future and its relation to himself. Particularly, humans appeal to the sixth sense on the road to

achieving success in social competitions and to reduce uncertainty in complex decision making processes. In addition to evidence linking genetic components to the sixth sense submodalities, there have been developed strategies for increasing the quality of perceptions provided by the sixth sense. Meditation, through which individuals try to be detached from the world, increases gamma-band activity and that increased gamma-band activity is found following top-down processing. Therefore it can be inferred that the detachment from the environment may enhance synchronization of the wave functions in favor of strengthening the sixth sense. It can serve as the mechanism of enhancement of the sixth sense in those whose sensory systems are intact, it can also serve as the mechanism of compensation in those who have sensory deficiencies. In the latter case, it in fact encourages creativity in the use of relatively strong senses. This justifies Beethoven's deafness and his great musical creativity or Bramblitt's blindness and his enormous capability to paint and many other similar examples. In summary, the present book is divided into five parts. Part 1 (chapters 1-6) provides information about the system of proprioception and its neurophysiology and biophysics. Part 2 (chapters 7-10) examines the system of interoception. The information provided in these two parts would enable us to move towards the next three parts of the story, aimed at developing a scientific system of the sixth sense. The first chapter of part 3 begins with concepts and uses them to arrive at reasonable conclusion that there must be a sense that requires multistep information processing and that is separate from the sense of proprioception and the sense of interoception. Such sense is commonly known as the sixth sense. However it should be re-numbered because the sense of proprioception is already known as the sixth sense. The second chapter of this part is to draw neurocircuitry that innervates the sixth sense in the mind of a man, while the third chapter would address the questions whether the sixth sense system requires an optimal competence or consciousness of mind to function properly and if so which is the optimal state: conscious or unconscious and competence or incompetence. In the fourth chapter of this part, we will focus on the self-other mergence as a pivotal step of the sixth sense system. The next chapter would be of great interest to neurobiologists. It talks about that the human sixth sense of the unseen world, either the unseen arrow of time or the unseen events, requires creativity and therefore the human sixth sense should be considered a source of creativity, variability and thus evolution. In the sixth chapter, the sixth sense is viewed as an economic activity stimulated by social environments. This chapter arisen from the fact that humans are full of enthusiasm to heighten their sixth sense and its accuracy and that they owe their enthusiasm largely to achieving the best possible profit and in other words to wining intense competitions in their life holds mainly on the concept of elasticity. Finally this part is finished by an amazing discussion on the art of the sixth sense. The first chapter of part 4 discusses physical theories that support the existence of sixth sense in the universe. The next chapter is to apply the Bayes' theory to the sixth sense, leading to the conclusion that the sixth sense improves multisensory integration through optimizing uncertainty of information received from other sensory modalities. Chapter three in this part would address whether relative timing is applicable to the sixth sense like other senses. The last part of book aimed at directly discussing the sixth sense into the context of human health and behavior is organized into four chapters. The first chapter is to discuss neurodevelopmental changes in the sixth sense, while the second and third ones will discuss that in relation to psychiatric and neurological disorders. The most striking question how much power the sixth sense the sixth sense have over human health and behavior is addressed in the fourth chapter of this part and final chapter of book, which will be prepared using neural network models and sophisticated portraits possible for the system of sixth sense.

It is now widely agreed that the climate is changing, global resources are diminishing and biodiversity is suffering. Developing countries - many of them considered by the World Tourism Organization to be 'Top Emerging Tourism Destinations' (UNWTO, 2009) - are already suffering the full frontal effect of environmental degradation. The challenge for developing countries is a triple-edged sword, how can economic prosperity be achieved without the perpetual depletion of nature's reserves, the destruction of rural habitat and the dislocation of traditional societies? Many emerging nations are looking increasingly to the tourism industry as the motor for economic development, with hospitality businesses at the forefront. This book uses twenty-five case studies to demonstrate how it is possible to create income and stimulate regional socio-economic development by using sustainable hospitality and tourism attractions. These case studies focus on issues such as the protection of indigenous cultures as a source of touristic curiosity; the preservation of the environment and the protection of endangered species - such as the plight of turtles in Sri Lanka or butterflies in Costa Rica to encourage tourism. Some cases cover government supported projects, for example, the green parks venture and regional tourism development in the Philippines, an archaeological park initiative in Honduras and the diversity of nature tourism in St. Vincent. Sustainable Hospitality and Tourism as Motors for Development is designed to give students, academics and practitioners a guide for best practices of sustainable hospitality operations in developing countries. Based on case studies, it provides a road map of how to achieve the goals of sustainability giving benchmark examples. The book not only taps into a contemporary business subject, but aims to provide readers with a better understanding of how sustainable theories can be put into practice in hospitality and tourism industries in developing countries.

THE NEW YORK TIMES BESTSELLER FROM THE AUTHOR OF 10% HAPPIER Too busy to meditate? Can't turn off your brain? Curious about mindfulness but more comfortable in the gym? This book is for you. You'll also get access to guided audio meditations on the 10% Happier app, to jumpstart your practice from day one. ABC News anchor Dan Harris used to think that meditation was for people who collect crystals, play Ultimate Frisbee, and use the word "namaste" without irony. After he had a panic attack on live television, he went on a strange and circuitous journey that ultimately led him to become one of meditation's most vocal public proponents. Harris found that meditation made him more focused and less yanked around by his emotions. According to his wife, it also made him less annoying. Science suggests that the practice can lower your blood pressure, mitigate depression and anxiety, and literally rewire key parts of the brain. So what's holding you back? In Meditation for Fidgety Skeptics, Harris and Jeff Warren, a masterful teacher and "Meditation MacGyver," embark on a gonzo cross-country quest to tackle the myths, misconceptions, and self-deceptions that keep people from meditating. It is filled with game-changing and deeply practical meditation instructions—all of which are also available (for free) on the 10% Happier app. This book is a trip worth taking. Praise for Meditation for Fidgety Skeptics "If you're intrigued by meditation but

don't know how to begin—or you've benefited from meditation in the past but need help to get started again—Dan Harris has written the book for you. Well researched, practical, and crammed with expert advice, it's also an irreverent, hilarious page-turner."—Gretchen Rubin, author of *The Happiness Project* "The ABC News anchor, a 'defender of worrying' who once had an anxiety attack on air, offers a hilarious and stirring account of his two-steps-forward-one-step-back campaign to sort 'useless rumination' from 'constructive anguish' via mindfulness, along with invaluable suggestions for following in his footsteps."—O: *The Oprah Magazine*

The final installment of the Steps on the Path to Enlightenment series examines the nature of reality with a master class in Buddhist Middle Way philosophy and meditation. The late Geshe Sopa was a refugee monk from Tibet sent to the United States by the Dalai Lama in 1963. He became a professor at the University of Wisconsin, training a generation of Western Buddhist scholars, and was a towering figure in the transmission of the Buddhism to the West. In this fifth and final volume of his commentary on Lama Tsongkhapa's masterwork on the graduated steps of the Buddhist path, Geshe Sopa explains the practice of superior insight, or wisdom, the pinnacle of the bodhisattva's perfections. All the Buddhist practices are for the purpose of developing wisdom, for it is wisdom that liberates from the cycle of suffering. All other positive actions, from morality to deep states of meditation, have no power to liberate unless they are accompanied by insight into the nature of reality. With unparalleled precision, Geshe Sopa unpacks this central principle with scholarly virtuosity, guiding the reader through the progressive stages of realization.

Most of us go through life experiencing only the material world, using our five physical senses - and not to their full potential, at that. But on rare occasions, we will catch a glimpse of the hidden, mysterious aspect of our existence, a flash of insight or inspiration received through the sixth sense. What we call "the sixth sense" is a natural, intuitive state of higher consciousness and spiritual awareness, a special power of inner knowing and psychic ability. Everyone has it, although it lies dormant in most people. But if nurtured and developed - a process easier than one might think - the sixth sense can be awakened, honed, and used to achieve greater joy and understanding in every aspect of your life, from your relationships to your financial affairs. In *Developing Your Sixth Sense*, world-renowned author and lecturer Stuart Wilde will show you practical ways to tap into this profound ability to improve the quality of your life's journey. You will learn: Seven levels of supersensory communication. How to win people over and discover the real meanings behind their words. How to control your etheric body. An action plan for creating your own luck. How to be a powerhouse of creativity. Energy patterns for loving relationships. The ESP of easy money. A system for recognizing "types" of people and avoiding the demands they can place on you. How to open and energize your chakras for healing. Why it's important not to interfere. How to protect yourself from negative energy. Techniques for communicating with other realms of existence. And much more... an infinite adventure.

It's a marvelous thing to know that you have the courage, discipline, and follow-through to enliven your consciousness. In this groundbreaking book, Stuart Wilde brings to light new and compelling information about the sixth sense and tells you how to develop it. He defines this sixth sense as sacred energy that taps you into the state of all-knowing. Once you discover the sixth sense/etheric point of view, it opens the energy centers in your subtle body and you take on more light, going naturally from stiff to pliant, flowing with life rather than struggling with it. Stuart tells us in *Sixth Sense* that "what you need is inner power, a personal charisma, a spiritual power, an extrasensory

perception that makes you bigger than life. You garner that energy through compassion, kindness, introspection, and solidity." After reading this book, your perception of life in all its subtlety and vastness will reach beyond the mundane to a special level of spirituality.

The world is simpler than it seems. Everything that happens occurs because of cause and effect.

Eliminate the cause of relationship problems, poverty, health issues, and disharmony-and you change the effect. Too often, though, we look for external causes, when the true cause lies within our own all-powerful and divine subconscious minds. The universe is made up of interconnected energy-and what are our thoughts if not pure energy? Change the workings of your inner mind, and you can quite literally change your life. In *Sixth Sense*, noted holistic success coach Eugene N. Nwosu provides a set of deceptively simple tools designed to help you "rewire" your subconscious mind, change your life, and acquire the enlightenment and wisdom vital for true balance, equilibrium, and success. Nwosu's practical affirmations help harness the mind's ability to operate in harmony with the unchanging rules of the infinite, divine universe. Simpler and easier to incorporate into everyday life than *The Secret* and its complexities, *Sixth Sense* frees you from the limitations of entrenched thought patterns, creating instead full engagement in your passions and dreams. Once properly aligned with the universe, you will succeed-all the time.

First published in 1911, "The Sixth Sense: Its Cultivation and Use" is a masterpiece on the Sixth Sense, or the Mystic sense. The book discusses this perceptive faculty in relation to health, thought, character, and religion. The author, Charles Henry Brent, was the Episcopal Church's first Missionary Bishop of the Philippine Islands [BISAC]; Chaplain General of the American Expeditionary Forces in World War I and Bishop of the Episcopal Church's Diocese of Western New York. He has been characterized as a "gallant, daring, and consecrated soldier and servant of Christ" who was "one of modern Christendom's foremost leaders, prophets, and seers." "The only real valuable thing is intuition." - Albert Einstein Your sixth sense is the world inside your head - the world of intuition or psychic power. It is a super sense, the cumulative power of all your other senses: sight, hearing, touch, smell and hearing. It's also an amazing source of creative power, understanding and insight. Everyone can tune into their sixth sense, but most choose to ignore it. Charles Henry Brent published more than twenty books. His works reveal a man absorbed in the problems and mysteries of the inner life. His book on the sixth sense is hugely interesting.
