The Parish Registers of Kirklington in the County of York. 1568-1812 Jeffrey Frank Jones Thisisthe?rstissueofanewjournaloftheLNCSjournalsubline.Theaimofthe journal is to encourage inter- and multidisciplinary research in the ?elds of c-puter science and life sciences. The recent paradigmatic shift in biology towards a system view of biological phenomena requires a corresponding paradigmatic shift in the techniques from computer science that can face the new challenges. Classical tools usually used in bioinformatics are no longer up to date and new ideas are needed. The convergence of sciences and technologies we are experiencing these days is changing the classical terms of reference for research activities. In fact clear distinctions between disciplines no longer exist because advances in one ?eld permit advances in others and vice versa, thus establishing a positive feedback loop between sciences. The potential impact of the convergence of sciences and technologies is so huge that we must consider how to control and correctly drive our future activities. International and national funding agencies are looking at interdisciplinary research as a key issue for the coming years, especially in the intersection of life sciences and information technology. To speed up this process, we surely need to establish relationships between researchers of di?erent communities and to de?ne a common language that will allow them to exchange ideas and - sults. Furthermore, expectations of di?erent communities can be merged only by running activities like common projects and experiences. "First published in 1967, this edition has been revised and updated by its editor, and includes substantial additional notes and bibliography. It contains Douglas's Palice of Honour, the major dream-vision poem he composed a decade before his Eneados translation. The Palice is a sprightly and learned poem, responsive both to Chaucerian and to Ovidian influences, but also inventively independent of them. Its yoking of poetics and the pursuit of virtue shows Douglas to be a significant early Renaissance writer. The volume also contains revised editions of two poems associated with Douglas, though unlikely to be his, the short poem Conscience and the lengthier and still neglected allegory of desire and self-government King Hart."--pub. desc.

This is the story of a man’s life from childhood in rural Igbo village in the mid-1930s, during the British colonial rule in Southern Nigeria to the first decade of the new millennium. It mirrors the life of a whole generation in an era of Nigeria’s most radical and dramatic changes and total transformation. It depicts the birth pangs, political upheavals, and competitiveness of an era of struggle for ascendancy of religious and cultural values that still continue. It tells how the author’s passion and ambition to transform his hometown, Urualla, into a “little London” was spurred by the compassionate and humanitarian support of his host families during his student days in the turbulent hippie era of the 1960s in America. This is a narrative of a life of adventure in terms of circumstances of birth, hazards, triumphs, love saga, passion, and fate that qualifies as an Odyssey.

This book criticizes the widespread view that the 1997 Asian crisis was due to 'crony capitalism' and puts the blame instead on misguided liberalization. It analyzes the case of Korea's business conglomerates, the chaebol, with particular attention to the car industry, to show how liberalization contributed to the crisis even at the level of the firm. It shows how those firms that had developed innovative capabilities survived the crisis much better than those that had merely expanded into markets opened up by liberalization.

This thesis presents analytical theoretical studies on the interplay between charge density waves (CDW) and superconductivity (SC) in the actively studied transition-metal dichalcogenide 1T-TiSe2. It begins by reapproaching a years-long debate over the nature of the phase transition to the commensurate CDW (CCDW) state and the role played by the intrinsic tendency towards excitonic condensation in this system. A Ginzburg-Landau phenomenological theory was subsequently developed to understand the experimentally observed transition from commensurate to incommensurate CDW (ICDW) order with doping or pressure, and the emergence of a superconducting dome that coexists with ICDW. Finally, to characterize microscopically the effects of the interplay between CDW and SC, the spectrum of CDW fluctuations beyond mean-field was studied in detail. In the aggregate, the work reported here provides an encompassing understanding of what are possibly key microscopic underpinnings of the CDW and SC physics in TiSe2.
