Objectivity has a history, and it is full of surprises. In Objectivity, Lorraine Daston and Peter Galison chart the emergence of objectivity in the mid-nineteenth-century sciences — and show how the concept differs from alternatives, truth-to-nature and trained judgment. This is a story of lofty epistemic ideals fused with workaday practices in the making of scientific images. From the eighteenth through the early twenty-first centuries, the images that reveal the deepest commitments of the empirical sciences — from anatomy to crystallography — are those featured in scientific

atlases: the compendia that teach practitioners of a discipline what is worth looking at and how to look at it. Atlas images define the working objects of the sciences of the eye: snowflakes, galaxies, skeletons, even elementary particles. Galison and Daston use atlas images to uncover a hidden history of scientific objectivity and its rivals. Whether an atlas maker idealizes an image to capture the essentials in the name of truth-to-nature or refuses to erase even the most incidental detail in the name of objectivity or highlights patterns in the name of trained judgment is a decision enforced by an ethos as well as by an epistemology. As Daston and Galison argue, atlases shape the subjects as well as the objects of science. To pursue objectivity — or truth-to-nature or trained judgment — is simultaneously to cultivate a distinctive scientific self wherein knowing and knower converge. Moreover, the very point at which they visibly converge is in the very act of seeing not as a separate individual but as a member of a particular scientific community. Embedded in the atlas image, therefore, are the

traces of consequential choices about knowledge, persona, and collective sight. Objectivity is a book addressed to any one interested in the elusive and crucial notion of objectivity — and in what it means to peer into the world scientifically. *CURRENT Essentials of Medicine, Fourth Edition* Princeton University Press I have read through this book and am really inspired by all the works that Dr. Mueller has done for the Karen hill tribe. The works and experiences that he had with the Karen people in the Karen State are tremendously amazing. This book will bring great understanding for people and foreigners who want to help out, especially those who are sympathetic to the causes and needy people who still lack many things. I enjoyed reading this book. It was a blessing to us Karens that we had someone like Dr. Mueller who helped to bring humanitarian assistance to the remote areas in order to spread the gospel and make things better for others. I deeply thank him for all the works that he has done for our Karen people and other ethnic groups. -Major General Ner Dah Bo Mya, Chief of

Staff, Karen National Defense Organization Dr. Larry Mueller is a pioneering physician who has the longest and most in-depth experience of any medical professional who served in the conflict areas of Burma. He donated significant professional time over twenty-five years serving in the Thai-Burmese border areas. Whether directly treating IDPs (internally displaced persons), or refugees in the border zones with his surgical skill, or training medics, he has been the most revered doctor in these areas and is considered an angel. Dr. Mueller is a brilliant surgeon who is flexible, inventive, and, above all, able to operate successfully in remote locations with very little support. Through his own surgeries and the training that he has imparted to our medics, Dr. Mueller has saved hundreds of lives and had a direct impact on healing and improving the lives of thousands more. -David Eubank, Founder and Director, Free Burma Rangers (www.freeburmarangers.org)
