Neurolinguistic Programming in Clinical Settings provides a theoretical framework for the clinical applications of Neurolinguistic Programming (NLP) protocols in mental health. It offers evidence-based models for a range of conditions; including PTSD, anxiety and depression, grief, phobias and binge-eating. Providing a follow up to the 2014 book *The Clinical Effectiveness of Neurolinguistic Programming*, this book updates the existing research evidence for NLP interventions with mental health

clinical conditions. It includes further evidence for its use with somatoform disorders, anxiety and depression, and as a general psychotherapy modality. The book outlines up-to-date evidence from clinical trials that demonstrate the success rate of NLP with PTSD populations and discusses how ongoing randomised clinical trials at Kings College London are demonstrating the clinical effectiveness of NLP protocols and are becoming more widely accepted by mainstream mental health care. Written by a team of internationally academically informed clinicians and researchers, the book will be key reading for academics, researchers and post-graduate students in the field of mental health research, psychotherapy

and counselling. It will also be of interest to clinicians and mental health professionals interested in NLP as a therapeutic modality.

*Doing Narrative Therapy* SAGE

In this unique book, noted family therapists Jeffrey L. Zimmerman and Victoria C. Dickerson explore how clients' problems are defined by personal and cultural narratives, and ways the therapist can assist clients in co-constructing and reauthoring narratives to fit their preferences. The authors share their therapeutic vision through a series of stories, fictionalized discussions, and minidramas, in which problems have a voice. Written in an engaging and personal style, the book challenges many dominant ideas in psychotherapy, inviting the reader to enter a world in which she or he can experience a radically different view of problems, people, and therapy. A wealth

of stories told from the clients' point of view illustrate the creative ways they begin to deal with problems: Individuals escape them, couples take their relationships back from problems, kids dump their problems, and teenagers work with their parents to fight their problems. Training and supervision from the perspective of students are also discussed. As entertaining as it is informative, this book will be welcomed by family therapists both novice and experienced, from a range of orientations. Offering a creative and accessible approach to clinical work, it also serves as a supplementary text in courses on family and narrative therapy.
