YAMILET QUINN

Intimna prepiska

Routledge

In this classic adventure story, a wealthy gentleman, Phileas Fogg, makes a bet that he can travel

around the world in eighty days. Fogg and his servant set off immediately, determined to win this race against time. Little do they know they aren't making the journey alone.... Fogg has been fingered as the culprit in a bank robbery, and a

detective in hot pursuit is trailing them as they cross every continent.

Achilleion BRILL

To uphold family honor and tradition, Sheetal Prasad is forced to forsake the man she loves and marry playboy millionaire Rakesh Dhanraj while the citizens of Raigun, India, watch in envy. On her wedding night, however, Sheetal quickly learns that the stranger she married is as cold as the marble floors of the Dhanraj mansion. Forced to smile at family members and cameras and pretend there's nothing wrong with her marriage, Sheetal begins to discover that the family she married into harbors secrets, lies and deceptions powerful enough to tear apart her world. With no one to rely on

and no escape, Sheetal must ally with her husband in an attempt to protect her infant son from the tyranny of his family.

A History of the Alans in the West

John Wiley & Sons Incorporated

This book presents new research on the geomorphological impacts of extreme precipitation events. It focuses on the extreme summer floods, which affected Central and Eastern Europe in 2010. Case studies on their consequences, including inundations, urban flooding, soil erosion, river bank retreat, alluvial fan accumulation, evolution of karst depressions, debris flows, landslides and soil saturation are presented for Poland, the Czech Republic,

Ukraine, Slovakia, Hungary, Romania, Slovenia, Croatia, Serbia, Bulgaria and Macedonia. This key applied geomorphology book is crucial for anyone interested in these processes and their consequences and also for decision makers who face these catastrophes.

Kosovo - Kosova

Springer

Fourteen papers, in English or French, describing Palaeolithic sites and discoveries and regional surveys in south east Europe.

The Decline and Fall of the Roman Empire

Cotsen Institute of Archaeology

The Sole Interest Of The Book Is To

Providde The Essential Contents Of Toxicology For Undergraduates.

An Attempt Has Been Made To Explain Right

From, History Till Clinical Condition Including Origin, Types, Etiopathogenesis Etc. Of Poisoning. Practical Perspectives Towards The Diagnosis, Investigations And Management According To Ayurveda And Contemporary Science Are Also Elaborated. Number Of Diagrams, Flowcharts And Coloured Illustrations Have Been Included Wherever Required For Better Understanding Off The Subject.

A study of the Neolithic in Macedonia

Andean Metallogeny
Geological Society of London

The fall of the Roman Empire is an event that stands like a monolith between the classical and the medieval

world, and its complexity and continuing relevance have made Rome's fall a compelling topic for historians and the reading public for centuries.

**Looking for Lolita:
Or Pictures Not
Taken** BAR

International Series
This large volume publishes the Proceedings of the International Workshop Identifying Changes held in Istanbul in 2002 and includes 25 papers which approach the Bronze to Iron Age transition primarily from an Anatolian perspective. Drawing on archaeological material from Anatolian sites, compared and contrasted with that of neighbouring areas such as Cyprus, Crete, Greece and the Pontic

and Caucasus, the contributors assess the nature and chronology of 2nd millennium BC cultural change. The papers reflect the major contribution that the natural sciences can make to this question, the need for more research into regional peculiarities and interactions, the need to track population movements and migrations, to investigate the pace of change and evidence for continuity from one artificially labelled period to another.

The System of
Mineralogy, Volume 1

U of Minnesota Press
For the first time, the arts and crafts of Thessaloniki, once the second largest city in the Byzantine Empire after Constantinople, are examined thoroughly through

archaeological remains, historical sources and epigraphic records. More than 80 years of archaeological research and a lifetime of personal research that covers 112 excavations, reveals at least 16 artisanal trades in detail. The book is organised chronologically with overviews of the political history and topography of Thessaloniki throughout its nineteen-centuries-long history. With an illustrated catalogue of each site and distribution maps, this work reveals relatively unknown aspects of life in Antiquity, the Early Christian period and Byzantium.

Douglass Bailey's volume fills the huge gap that existed for a comprehensive synthesis, in English, of the archaeology of the Balkans between 6,500 and 2,000 BC; much research on the prehistory of Eastern Europe was inaccessible to a western audience before now, because of linguistic barriers. Bailey argues against traditional interpretations of the period, which focus on the origins of agriculture and animal breeding. He demonstrates that this was a period when monumental social and material changes occurred in the lives of the people in this region, with new technologies and ways of displaying identity. Balkan Prehistory will

be required reading for everyone studying the Neolithic, Copper and early Bronze Ages of Eastern Europe.

Arts, Crafts and Trades in Ancient and Byzantine Thessaloniki

Chaukhambha Publications

This highly-praised and authoritative account surveys the history of the Ottoman Empire from its obscure origins in the 14th century, through its rise to world-power status in the 16th century, to the troubled times of the 17th century.

Going beyond a simple narrative of Ottoman achievements and key events, Colin Imber uses original sources and research, as well as the rapidly growing body of modern scholarship on the subject, to show how the Sultans governed

their realms and the limits on their authority. A helpful chronological introduction provides the context, while separate chapters deal with the inner politics of the dynasty, the court and central government, the provinces, the law courts and legal system, and the army and fleet. Revised, updated and expanded, this new edition now also features a separate chapter on the Arab provinces and incorporates the most recent developments in the field throughout. New to this Edition: - An increased focus on religion, and on non-Muslim communities - More on the provinces and culture - An expanded taxation chapter, with more on

charitable trusts, trade and the economy - Updated references throughout

Handbook of Mineralogy: Borates, carbonates, sulfates

Independently Published

"Looking for Lolita" is a trans modern novel that plays with the notion of (im)possibility of writing a novel in our digital age while telling a compelling life story of its heroine, Lola Dunavska, who is a contemporary take on Mrs. Dalloway. In our heroine's search for the archetype of Lolita in arts and in her own life, historical figures such as Nabokov and Kubrick appear as fictional characters. In the background of this novel written in various voices there is the tragedy of 9/11

intertwined with a story of love and loss. I am a transnational Serbian-American poet and author of 15 books living between New York and Belgrade. I am also a world traveler and a Ph.D. from Princeton University.

Macedonia, Thrace and Illyria Scuola Normale Superiore

Medieval Jewelry and Burial Assemblages in Croatia analyzes the Croatian archaeological heritage from the 8th to the 15th century, consisting mostly of jewelry (earrings) findings from cemeteries.

Stratigraphy is used to establish horizons and phases of material culture, as well as the structure of the burial chambers. All in comparison with materials from

neighboring regions of Europe.

Metallogenesis and Tectonics of the Russian Far East, Alaska, and the Canadian Cordillera BAR International Series

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the

original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and

we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

This book is the first comprehensive account in English of the geology of Chile, providing a key reference work that brings together many

years of research, and written mostly by Chilean authors from various universities and other centres of research excellence. The 13 chapters begin with a general overview, followed by detailed accounts of Andean tectonostratigraphy and magmatism, the amazingly active volcanism, the world class ore deposits that have proven to be so critical to the welfare of the country, and Chilean water resources. The subject then turns to geophysics with an examination of neotectonics and earthquakes, the hazardous frequency of which is a daily fact of life for the Chilean population. There are chapters on the offshore geology and

oceanography of the SE Pacific Ocean, subjects that continue to attract much research not least from those seeking to understand world climatic variations, and on late Quaternary land environments, concluding with an account examining human colonization of southernmost America. The geological evolution of Chile is the c. 550 million year history of a continental margin over 4000 km long. During his voyage on H.M.S. Beagle, an extended visit to Chile (1834-35) had a profound impact on Charles Darwin, especially on his understanding of volcanoes, earthquakes and tsunamis.

The Scientific Proceedings Paideia

Press

This book constitutes the refereed proceedings of the First International Conference on Audio- and Video-based Biometric Person Authentication, AVBPA'97, held in Crans-Montana, Switzerland, in March 1997. The 49 revised papers presented were carefully reviewed and selected by the program committee for inclusion in the book; also included are four invited contributions. The papers are organized in sections on facial features localisation, lip and facial motion, visual non-face biometrics, face-based authentication, text-dependent speaker authentication, text-independent authentication, audio-

video features and fusion, and systems and applications.

The Palaeolithic of the Balkans Arkose Press

A rich picture of village life in the 7th and 6th millennia BC, as seen through the excavations of an important site in Greece. Especially noteworthy is the extensive corpus of materials relating to domestic cult practice (figurines and vessels). Also included are specialist studies of faunal and floral remains, lithics, and radiocarbon dates.

Slikarstvo Stojana Čelića Simon and Schuster

Using thousands and sometimes millions of pieces of colored stone or glass to create elaborate patterns or scenes is a painstaking

and expensive way to decorate a surface. Yet the art of mosaic enjoyed spectacular success in the Graeco-Roman world, where its practitioners created some of the most beautiful artworks in history. This handsomely illustrated and elegantly written book traces the evolution of mosaic from the Hellenistic period to the early Christian era, with particular emphasis on the Roman Empire, and examines its regional variations from Britain to North Africa and from the Levant to the Spanish seaboard. The eminent classical scholar Roger Ling explains how mosaics were first made in the fifth century B.C. with the use of inset pebbles to provide durable pavements. He

shows how mosaic became one of the hallmarks of luxury in Roman times, when such masterpieces of imperial floor decoration as the black-and-white silhouette pavements of Ostia and the colorful figure compositions of Piazza Armerina in Sicily were created. From pavements, mosaic graduated to walls and ceilings, where it culminated in the soaring blue and gold work of early Christian churches in Rome, Constantinople, and Ravenna. Ling examines the wide range of styles and subject matter employed by mosaicists, whether geometric patterns or

figurative scenes of mythology, agriculture, and hunting, and explores what mosaics reveal about domestic and imperial tastes and aspirations. Such topics as techniques and materials, the relationship of mosaic to other forms of interior decoration, and the influence of ancient mosaics in more recent times are also discussed in detail. Illuminating, attractive, and affordable, this book makes a major contribution to classical scholarship and will also appeal strongly to art historians, artists, designers, and general readers.
