Economics, Governance, and Politics in the Wine Market

Penguin Random House South Africa

Following an introductory discussion of the Treaty provisions on agriculture, this illuminating work examines the four regulations that currently govern the Common Agricultural Policy in the areas of Direct Payments, Rural Development, Finance, and the Common Organisation of the markets and considers their interpretation by the European Courts. It concludes with an astute assessment of the proposals for further reform, which will give Member States greater discretion in fine-tuning the principles of the policy established at European level to the particular characteristics of their agricultural sector.

Beyond Human Rights and the War on Terror CRC Press

Bio-based Materials and Biotechnologies for Eco-efficient Construction fills a gap in the published literature, discussing bio-based materials and biotechnologies that are crucial for a more sustainable construction industry. With comprehensive coverage and contributions from leading experts in the field, the book includes sections on Bio-based materials and biotechnologies for infrastructure applications, Bio-based materials and biotechnologies for building energy efficiency, and other applications, such as using biotechnology to reduce indoor air pollution, for water treatment, and in soil decontamination. The book will be an essential reference resource for academic

researchers, civil engineers, contractors working in construction works, postgraduate students and other professionals. Focuses on sustainability and green concepts in construction Discusses recent trends on bio-based materials and biotechnologies for eco-efficient construction Covers many important aspects, including infrastructure applications, energy efficiency for building construction, and air, water and soil related problems

This book - in conjunction with the double volume LNCS 9225-9226 - constitutes the refereed proceedings of the 11th International Conference on Intelligent Computing, ICIC 2015, held in Fuzhou, China, in August 2015. The total of 191 full and 42 short papers presented in the three ICIC 2015 volumes was carefully reviewed and selected from 671 submissions. Original contributions related to this theme were especially solicited, including theories, methodologies, and applications in science and technology. This year, the conference concentrated mainly on machine learning theory and methods, soft computing, image processing and computer vision, knowledge discovery and data mining, natural language processing and computational linguistics, intelligent control and automation, intelligent communication networks and web applications, bioinformatics theory and methods, healthcare and medical methods, and information security.

The structure, uniform, equipment, and training of the South African Police Service have changed since apartheid, says Marks (sociology, U. of KwaZulu-Natal); the force proclaims a community-oriented service ethic, hires more women and black personnel in high positions, and is rarely rather than often excessively violent during demonstrations and protests. Still, she asks how much the police have changed, and whether it is really

to change them, or indeed to change the police anywhere.

This book offers the reader a comprehensive understanding and the multitude of methods utilized in the research of urban mobilities with cities and 'the urban' as its pivotal axis. It covers theories and concepts for scholars and researchers to understand, observe and analyse the world of urban mobilities. The Handbook of Urban Mobilities facilitates the understanding of urban mobilities within a historic conscience of societal transformation. It explores key concepts and theories within the 'mobilities turn' with a particular urban framework, as well as the methods and tools at play when empirical, urban mobilities research is undertaken. This book also explores the urban mobilities practices related to commutes; particular modes of moving; the exploration of everyday life and embodied practices as they manifest themselves within urban mobilities; and the themes of power, conflict, and social exclusion. A discussion of urban planning, public control, and governance is also undertaken in the book, wherein the themes of infrastructures, technologies and design are duly considered. With chapters written in an accessible style, this handbook carries timely contributions within the contemporary state of the art of urban mobilities research. It will thus be useful for academics and students of graduate programmes and post-graduate studies within disciplines such as urban geography, political science, sociology, anthropology, urban planning, traffic and transportation planning, and architecture and urban design.

In spite of Edward Snowden's disclosures about government abuses of dragnet communication surveillance, the surveillance industry continues to expand around the world. Many people have become resigned to a world where they cannot have a reasonable

expectation of privacy. The author looks at what can be done to rein in these powers and restructure how they are used beyond the limited and often ineffective reforms that have been attempted. Using southern Africa as a backdrop, and its liberation history, Jane Duncan examines what an anti-capitalist perspective on intelligence and security powers could look like. Are the police and intelligence agencies even needed, and if so, what should they do and why? What lessons can be learnt from how security was organised during the struggles for liberation in the region? Southern Africa is seeing thousands of people in the region taking to the streets in protests. In response, governments are scrambling to acquire surveillance technologies to monitor these new protest movements. Southern Africa faces no major terrorism threats at the moment, which should make it easier to develop clearer anti-surveillance campaigns than in Europe or the US. Yet, because of tactical and strategic ambivalence about security powers, movements often engage in limited calls for intelligence and policing reforms, and fail to provide an alternative vision for policing and intelligence. Surveillance and Intelligence in Southern Africa examines what that vision could look like.

Public Policy in Agriculture Routledge

The book reflects academically on important and relevant ethical fields from a multidimensional South African context. The book challenges conventional borders from different ethical, theological, philosophical, economic and cultural perspectives with insight and expertise and seeks to add academic-ethical value, locally and globally, with its different points of departure deeply embedded in justice. From a mainly qualitative methodological perspective, this scholarly book demonstrates that ethics requires analytical thinking and critical people who, in an existentially and emancipatory way, can help make the world a more just, decent and humane place in which to live. The authors, who represent different academic and cultural backgrounds, present in their respective chapters their research systematically, intersectionally and constructivistically, based on profound theoretical analysis and reasoning. This epistemology results in an act of knowing that actively gives meaning and order to the reality to which it is responding. By doing this, they point out that people are in an ongoing process of becoming more human – allowing ourselves and our fellow human beings to flourish and to reach fuller potential through justice-based ethical reflection and

action.

Beneath the Killing Fields Emerald Group Publishing

The story of a 'rogue unit' operating within the South African Revenue Service (SARS) became entrenched in the public mind following a succession of sensational reports published by the Sunday Times in 2014. The unit, the reports claimed, had carried out a series of illegal spook operations: they had spied on President Jacob Zuma, run a brothel, illegally bought spyware and entered into unlawful tax settlements. In a plot of Machiavellian proportions, head of the elite crime-busting unit Johann van Loggerenberg and many of SARS's top management were forced to resign. Van Loggerenberg's select team of investigators, with their impeccable track record of busting high-level financial fraudsters and nailing tax criminals, lost not only their careers but also their reputations. Now, in this extraordinary account, they finally get to put the record straight and the rumours to rest: there was no 'rogue unit'. The public had been deceived, seemingly by powers conspiring to capture SARS for their own ends. Shooting down the allegations he has faced one by one, Van Loggerenberg tells the story of what really happened inside SARS, revealing details of some of the unit's actual investigations.

Austerity was presented as the antidote to sluggish economies, but it has had far-reaching effects on jobs and employment conditions. With an international team of editors and authors from Europe, North America and Australia, this illuminating collection goes beyond a sole focus on public sector work and uniquely covers the impact of austerity on work across the private, public and voluntary spheres. Drawing on a range of perspectives, the book engages with the major debates surrounding austerity and neoliberalism, providing grounded analysis of the everyday experience of work and employment.

Rock art is one of the most visible and geographically widespread of cultural expressions, and it spans much of the period of our species' existence. Rock art also provides rare and often unique insights into the minds and visually creative capacities of our ancestors and how selected rock outcrops with distinctive images were used to construct symbolic landscapes and shape

worldviews. Equally important, rock art is often central to the expression of and engagement with spiritual entities and forces, and in all these dimensions it signals the diversity of cultural practices, across place and through time. Over the past 150 years, archaeologists have studied ancient arts on rock surfaces, both out in the open and within caves and rock shelters, and social anthropologists have revealed how people today use art in their daily lives. The Oxford Handbook of the Archaeology and Anthropology of Rock Art showcases examples of such research from around the world and across a broad range of cultural contexts, giving a sense of the art's regional variability, its antiquity, and how it is meaningful to people in the recent past and today - including how we have ourselves tended to make sense of the art of others, replete with our own preconceptions. It reviews past, present, and emerging theoretical approaches to rock art investigation and presents new, cutting-edge methods of rock art analysis for the student and professional researcher alike.

OECD Food and Agricultural Reviews Agricultural Policies in Costa Rica Springer

The world is in the midst of a poaching and Illegal Wildlife Trade (IWT) crisis which threatens survival of many species. Poaching and IWT involves a wide range of species including insects, reptiles, amphibians, fish and mammals. IWT has been estimated by different sources to be worth USD 7–23 Billion annually. Targeted species in South Africa include terrestrial mammals such as rhino, endangered plants including cycads and marine species such as abalone. South Africa lost 1,215 rhinos to poaching in 2014 up from 13 rhinos lost in 2007. Demand for wildlife and wildlife products was driven by need for pharmaceuticals, food, pets, ornamental and traditional medicinal purposes. The poaching crisis and IWT are no longer emerging issues. The poaching crisis began in the mid 2000's when demand for ivory and rhino horn significantly increased. From that time, wildlife crime has become more sophisticated and now involves large-scale, transnational organised crime. The spike in wildlife crime poses a growing threat not only to wildlife but also to national security, rule of law, sustainable development, and the well-being of local communities. The scale and nature of the challenges posed by wildlife crime have been recognized in international fora. International organizations such as CITES and INTERPOL have held discussions and made decisions on interventions to

reduce or curb this crime. High level political conferences have also addressed the issue. Despite these national and international efforts, corruption, weak legislation, weak judicial systems and light sentences allow criminal networks to continue being involved in IWT because, to them, it is a low risk business with high returns. South Africa has enhanced its law enforcement efforts to combat poaching and IWT. The South African government's approach to criminal justice is contained in the overarching 1996 National Crime Prevention Strategy (NCPS). The NCPS motivated a shift in emphasis from crime control to crime prevention which is a shift towards understanding crime as a social issue rather than a solely security issue. It is based on 3 pillars, that is, improving the criminal justice process, reducing crime through environmental design, changing public values and education and reducing transnational crime. The 1998 White Paper on Safety and Security builds on this NCPS framework. It focuses on three key areas, namely law enforcement, crime prevention and institutional reform to meet delivery goals. While both these documents are still applicable to understand South Africa's approach to criminal justice, the overall strategies seem to have shifted. The South African Police Service adopted a high profile strategy in March 2000 to combat crime in particular hotspots. The White Paper on Local Government 1998 also calls for crime prevention and encourages its integration with other aspects of local development. Partnerships with NGOs and community-based organizations are called for especially in areas where local government lacks skills, including crime prevention. In 2012 Cabinet approved the Integrated Social Crime Prevention Strategy developed by the National Department of Social Development. Further the White Paper on Community Safety Forums (2012) led to the establishment of community safety forums, which are supposed to be coordinating structures at local government level. The National Development Plan published in 2012 also attaches significant importance to the safety. The key enforcement institution for wildlife crimes in South Africa is the Department of Environmental Affairs (DEA) through its Environmental Management Inspectorate (EMI). According to the DEA, illegal hunting continued to be the predominant wildlife crime in the 2014/2015 fiscal year. There were 386 arrests for rhino related offences which was an increase from 343 arrests in 2013. The number of environmental crimes finalised increased

from 165 to 265 cases in the 2014/2015 reporting period, compared to the 2013/2014 reporting period. The conviction rate also increased from 86% to 94.7%.

An ideal text for introductory information security courses, the second edition of Elementary Information Security provides a comprehensive yet easy-to-understand introduction to the complex world of cyber security and technology. Thoroughly updated with recently reported cyber security incidents, this essential text enables students to gain direct experience by analyzing security problems and practicing simulated security activities. Emphasizing learning through experience, Elementary Information Security, Second Edition addresses technologies and cryptographic topics progressing from individual computers to more complex Internet-based systems.

Enlarging the Scope of Peace Psychology Springer Nature

The popularity of the Internet and the affordability of information technology (IT) hardware and software have resulted in an explosion dramatic increase in the number of applications, architectures, and platforms. Workloads have changed. Many applications, including mission-critical ones, are deployed on a variety of platforms, and the IBM® System z® design has adapted to this change. It takes into account a wide range of factors, including compatibility and investment protection, to match the IT requirements of an enterprise. This IBM Redbooks® publication provides information about the IBM zEnterprise® BC12 (zBC12), an IBM scalable mainframe server. IBM is taking a revolutionary approach by integrating separate platforms under the well-proven System z hardware management capabilities, while extending System z qualities of service to those platforms. The zEnterprise System consists of the zBC12 central processor complex, the IBM zEnterprise Unified Resource Manager, and the IBM zEnterprise BladeCenter® Extension (zBX). The zBC12 is designed with improved scalability, performance, security, resiliency, availability, and virtualization. The zBC12 provides the following improvements over its predecessor, the IBM zEnterprise 114 (z114): Up to a 36% performance boost per core running at 4.2 GHz Up to 58% more capacity for traditional workloads Up to 62% more capacity for Linux workloads The zBX infrastructure works with the zBC12 to enhance System z virtualization and management through an integrated hardware platform that spans

mainframe, IBM POWER7®, and IBM System x® technologies. The federated capacity from multiple architectures of the zEnterprise System is managed as a single pool of resources, integrating system and workload management across the environment through the Unified Resource Manager. This book provides an overview of the zBC12 and its functions, features, and associated software support. Greater detail is offered in areas relevant to technical planning. This book is intended for systems engineers, consultants, planners, and anyone who wants to understand zEnterprise System functions and plan for their usage. It is not intended as an introduction to mainframes. Readers are expected to be generally familiar with existing IBM System z technology and terminology.

In recent years, developed countries have formulated public policies in agriculture ranging from supporting rural life and farm income to promoting sustainability of food and fibre production. Public Policy in Agriculture: Impact on Labor Supply and Household Income addresses the lack of empirical research in this area. It explores the impact of differing approaches to public policy through a series of international case studies, from the USA and Canada to South Korea, Norway, Slovenia and Taiwan. At a time when much of the developed world has been experiencing budget deficits and policy-makers and the public in general have re-opened the debate on public expenditures in the agricultural sector, this is a timely volume. Mishra, Viaggi and Gomez y Paloma have written an authoritative guide to agricultural public policy that will serve as a reference for academics, researchers, students, and policy-makers.

Content Area Literacy Strategies That Work Jonathan Ball Publishers

This book explores how social and territorial boundaries have influenced the approaches and practices of the South Africa Police Service (SAPS). By means of a historical analysis of South Africa, this book introduces a new concept, 'police frontierism', which illuminates the nature of the relationships between the police, policing and boundaries, and can potentially be used for future case study research. Drawing on a wealth of research, this book examines how social and territorial boundaries strongly influenced police practices and behaviour in South Africa, and how social delineations amplify and distort existing police

prejudices against those communities on the other side of the boundary. Focusing on cases of high-density police operations, public-order policing and the recent policing of the COVID-19 lockdown, this book argues that poor economic conditions combined with an increased militarisation of the SAPS and a decline in public trust in the police will result in boundaries continuing to fundamentally inform police work in South Africa. This book will be of interest to scholars and students interested in policing in post-colonial societies characterised by high levels of violence, as well as police work and police militarization.

Dayside Magnetosphere Interactions Edward Elgar Publishing
Policing in South Africa has gained notoriety through its extensive history of oppressive law enforcement. In 1994, as the country's apartheid system was replaced with a democratic order, the new government faced the significant challenge of transforming the South African police force into a democratic police agency—the South African Police Service (SAPS)—that would provide unbiased policing to all the country's people. More than two decades since the initiation of the reforms, it appears that the SAPS has rapidly developed a reputation as a police agency beset by challenges to

its integrity. This book offers a unique perspective by providing in-depth analyses of police integrity in South Africa. It is a case study that systematically and empirically explores the contours of police integrity in a young democracy. Using the organizational theory of police integrity, the book analyzes the complex set of historical, legal, political, social, and economic circumstances shaping police integrity. A discussion of the theoretical framework is accompanied by the results of a nationwide survey of nearly 900 SAPS officers, probing their familiarity with official rules, their expectations of discipline within the SAPS, and their willingness to report misconduct. The book also examines the influence of the respondents' race, gender, and supervisory status on police integrity. Written in a clear and direct style, this book will appeal to students and scholars of criminology, policing, sociology, political science, as well as to police administrators interested in expanding their knowledge about police integrity and enhancing it in their organizations.

Nonlinear Wave and Plasma Structures in the Auroral and Subauroral Geospace presents a comprehensive examination of the self-consistent processes leading to multiscale

electromagnetic and plasma structures in the magnetosphere and ionosphere near the plasmopause, particularly in the auroral and subauroral geospace. It utilizes simulations and a large number of relevant in situ measurements conducted by the most recent satellite missions, as well as ground-based optical and radar observations to verify the conclusions and analysis. Including several case studies of observations related to prominent geospace events, the book also provides experimental and numerical results throughout the chapters to further enhance understanding of how the same physical mechanisms produce different phenomena at different regions of the near-Earth space environment. Additionally, the comprehensive description of mechanisms responsible for space weather effects will give readers a broad foundation of wave and particle processes in the near-Earth magnetosphere. As such, *Nonlinear Wave and Plasma Structures in the Auroral and Subauroral Geospace* is a cutting-edge reference for space physicists looking to better understand plasma physics in geospace. Presents a unified approach to wave and particle phenomena occurring in the auroral and subauroral geospace Summarizes the most current theoretical concepts related to the generation of the large-scale electric field near the plasmopause by flows of hot plasma from the reconnection site Includes case studies of the observations related to the most "famous events during the last 20 years as well as a large number of experimental and numerical results illustrated throughout the text
